Further additions to the full electrical vehicle conversions completed by FSL

The vehicle has been designed for the safe and secure transport of high-end retail goods.

The vehicle has its own independent power system to control all aspects of the vehicle security In line with the client's specification and requirements. There is no integration into the manufacturers Electrical system therefore, negating any potential warranty issues.

The secure area is lined and protected with anti-cut protection together with the installation of additional Security locking devices.

The vehicle glazing has also been enhanced to provide a greater degree of protection.

The conversion is backed up the FSL Fleetcare team that provide support 24/7

For further information on electric vehicle conversions please feel free to make contact.

Secure cargo area

Heavy duty tail gate locking system
